

Native or indigenous research and/or engagement?

Answer 'Yes' if your proposal falls into one of the categories described below.

- The research or institutional engagement *intentionally* involves participation by members of a sovereign tribe or Indigenous community and may foreseeably result in research results with implications specific to a tribe, Indigenous community, or to individuals as members of the tribe or community.
Note: Such engagement may occur with Native or Indigenous peoples outside the U.S.
- The research or institutional engagement takes place in Indian Country, or Alaska Native homelands, and/or on land under the control or jurisdiction of a sovereign tribe or Indigenous community.
Note: Such engagement may occur with Native or Indigenous peoples outside the U.S.
- Human research is conducted in Indian Health Service (IHS) facilities or involving IHS staff or resources.
Note: Additional engagement with the IHS, tribal Institutional Review Boards (IRBs), or other entities may be required.
- The research involves human subjects, including genetic testing or testing of blood, tissue, or other biological materials if the individual's membership in or affiliation with a tribe or Indigenous community is identified, and that is intended to or may foreseeably result in conclusions or generalizations about a tribe, Indigenous community, or individuals as members of the tribe or community.
- Any research or institutional engagement involving human remains, funerary objects, sacred objects, or objects of cultural patrimony that are subject to the Native American Graves Protection and Repatriation Act.
